Pelanggan

```
package id.ac.unand.fti.si.pbo;

public class Pelanggan{
   public String nama;
   public int noId;
   public String noHp;
   public String email;
   public int status; // 1 = aktif, 0 = non-aktif

public boolean member;

public boolean member;
```

Kelas Transaksi

```
src > main > java > id > ac > unand > fti > si > pbo > decomposed in the package id.ac.unand.fti.si.pbo;

public class Transaksi{
    public int jumlahBarang;
    public int hargaBarang;

Pelanggan khoiri = new Pelanggan();

public Transaksi(Pelanggan khoiri){
    this.khoiri=khoiri;

public double hitungTotalBayar(){
    int k=jumlahBarang*hargaBarang;
    if(khoiri.member==true){
        if(k<500000){
            return k;
        }
        if(k<1000000){
            return k-k/100;
        }
        return k-k*3/100;
    }
    return k;
}

return k-k*5/190;
}
return k;
}
</pre>
```
